

Algar Desert Fox Logging Unit

The Desert Fox Logging Unit is a Heavy duty aluminum van built on Mercedes model U500 Unimog 280 HP engine, designed to operate in Desert environment, the advantage of this unit is equipped with two wire drums (0.108" slickline and 7/32" electric line) with a capacity of 25,000 ft each. This Unit is equipped with HD closed loop hydraulic system, two speed hydraulic motor drive system, 10kw hydraulic drive generator, drum speed up to 1,570 ft/min, pulling power up to 5,300lb and 110 - 220v ac electrical system.

Multi-tasking Integrated Digital Acquisition System

The Sondex Multi-tasking Integrated Digital Acquisition System is a PC based logging system available as industrial 19" rack-mount or portable suitcase size units. The rack mount version has many duplicated hardware features for reliability during operations.

Running under Windows, the system can accommodate a variety of analogue, digital or pulse inputs and is optimized for use with the full range of Sondex Production Logging, Casing Inspection and other Cased Hole equipment. Full control of the logs is available including simultaneous recording & playback, curve merging, annotation, calibration, headers & footers, graphic toolstring configuration, on screen Depth & line Speed etc. The software enables everything from a field print to a presentation plot. The PC basis allows the running of other standard software packages without the need to transfer data to another computer.

Log output is to a high-resolution screen and a wide variety of thermal film and paper plotting devices. Archive logs can be recorded on DAT tape or CD-ROM.
